

Vinylinx Luxury Vinyl Flooring Maintenance Guide

- Do not wash/mop the floor for at 48-72 hours after installation.
- Sweep or vacuum regularly to remove grit that can scratch your new flooring. Use doormats outside each entrance to your home to prevent dirt, sand, grit, and other substances such as oil, asphalt and driveway sealer from being tracked onto your flooring. Use non-staining mats on your flooring. Do not put rubber-backed, latex-backed or coco fiber mats on your flooring because they may stain or damage the surface.
- Wash the flooring with a neutral detergent cleaner. Do not clean with acetone, toluene and other chemicals without professional construction.
- Do not apply polish/sealer as this can make the flooring slippery.
- Wipe up spills promptly with a damp cloth or mop, to reduce the risk of staining.
- Heavy furniture or equipment that is moved across the flooring should be fitted with felt pads, flat glides, or similar to avoid scratching the surface of the floor.
- Do not install your flooring or install it in areas subject to frequent standing water, or in high moisture areas.
- Protect your flooring from excessive direct heat, temperature variation or direct sunlight using curtains, blinds and temperature controls.

Caution: The flooring can be slippery when they become wet. Use extreme caution when walking on the wet flooring.
